

## Regenerative Medicine: A New Paradigm In Healthcare

Regenerative medicine portends a fundamental shift not only in clinical therapies, but in clinical practices. It supports superior, repeatable and more transparent patient outcomes – at a lower cost than many current standards of care. It leads to improved patient and clinician experience. No less than were pharmaceuticals and surgery in the past, it is a critical part of the future of medicine and health.

Evidence-based regenerative medicine procedures (“RMP’s”) integrate closely with other current trends in healthcare delivery -- ambulatory therapies, value-based medicine, re-establishing the physician/patient relationship, telemedicine, focus on pre- and post-TX, data-driven and transparent standards, sharing of international best practices.

As with any new paradigm in medicine, broad adoption will depend on education, evidence, respected leadership and standards. As with any new paradigm, those who prepare for its consequences will most benefit.

### Mission Statement

Regen Med works with academic medical centers, as well as smaller clinics, to exploit the many opportunities inherent in regenerative medicine. The Company was established by internationally respected surgeons and scientists, who understand the needs of busy department chairs, clinicians, payors and, of course, patients.

In principle, many hospital groups have the ability to develop successful regenerative medicine centers of excellence on their own. In practice, however, they have not done so. Regen Med has a single focus – helping providers harness, and as needed supplement, their resources to establish an [integrated regenerative medicine center](#) which (i) ensures superior, repeatable outcomes across multiple indications, (ii) provides a rewarding professional and patient experience, and (iii) does so in a product-agnostic, efficient and financially viable manner.

Support includes [education and training](#), space and equipment specifications, business plan structuring and execution, patient education and marketing materials, key opinion leader consultations, data collection and reports through [inCytes™](#), international professional collaboration, regulatory compliance, international patient outreach, study/trial design and execution and product incubation.

### Regenerative Medicine Network

The desire to learn from each other, to collaborate, is fundamental to healthcare professionals. Indeed, this desire has led to virtually all advances in medicine.

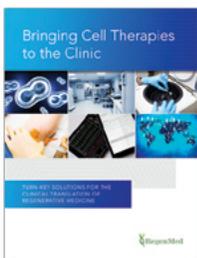

The Regen Med Network is not another alliance, registry or professional society. Rather, it is a commitment by all of its members to share knowledge and collaborate in the transformative field of regenerative medicine. It is the commitment by Regen Med – directed by healthcare professionals for the benefit of their peers -- to invest in and make available to all members the tools, platforms and resources which will support that collaboration in a deeply meaningful way.

Participation in the Regen Med Network helps you reclaim the excitement which first inspired you to enter the noble field of medicine.

Membership details and benefits can be found our website.
