- Over 5,000 orthopedic procedures annually.
- Landmark hospital of [Gruppo San Donato](#), 3.9 mm patients annually.
- Member of [ISOC](#).
- >350 Scientific Publications in 2017.

Affiliate

As a major academic research institution, with an international reputation in musculoskeletal procedures, IOG already had in place the scientific and clinical expertise for a regenerative medicine center of excellence. The ambulatory nature of RMP's, however, had led to many being performed off hospital premises. This in turn resulted in variable outcomes, failure to collect or organize clinical data, patient confusion and other negative consequences.

Objectives

Regen Med sat down with leadership from IOG's clinical, scientific and executive departments to determine respective goals. Those goals were merged into shared objectives, and used as the founding pillars of the RE.GA.IN™ business plan. This strategy directly incentivized cross-departmental collaboration and translation, and would result in a structure that is greater than the sum of its parts.

Select Regen Med Activities

Results

RE.GA.IN™ sees first patient within four months of contract signature, and 1 month ahead of schedule.

High profile patients include select members of AC Milan, Italian National Ski Team, and others.

Patient Cases treated by RE.GA.IN™ growing month over month.

Coordinating workshops, private studies and trials for participating industry partners.

Licensing RE.GA.IN™ protocols and accreditation to external hospital groups.

Expanding into new pathologies, surgical protocols and cell products.
